

# Chapter 1

# Demo problem: Large-amplitude shear deformation of a 3D elastic solid

Detailed documentation to be written. Here's the already fairly well documented driver code...

```

/// Constructor:
ElasticCubicMesh(const unsigned &nx, const unsigned &ny, const unsigned &nz,
                  const double &a, const double &b, const double &c,
                  TimeStepper* time stepper_pt=&Mesh::Default_TimeStepper) :
SimpleCubicMesh<ELEMENT>(nx,ny,nz,-a,a,-b,b,-c,c,time stepper_pt)
{
    //Assign the initial lagrangian coordinates
    set_lagrangian_nodal_coordinates();
}

/// Empty Destructor
virtual ~ElasticCubicMesh() { }

};

//=====
// Global variables
//=====
namespace Global_Physical_Variables
{
    /// Pointer to strain energy function
    StrainEnergyFunction* Strain_energy_function_pt;

    /// Pointer to constitutive law
    ConstitutiveLaw* Constitutive_law_pt;

    /// Elastic modulus
    double E=1.0;

    /// Poisson's ratio
    double Nu=0.3;

    /// "Mooney Rivlin" coefficient for generalised Mooney Rivlin law
    double C1=1.3;

    /// Body force
    double Gravity=0.0;

    /// Body force vector: Vertically downwards with magnitude Gravity
    void body_force(const Vector<double>& xi,
                    const double& t,
                    Vector<double>& b)
    {
        b[0]=0.0;
        b[1]=-Gravity;
    }
}

//=====
// Boundary-driven elastic deformation of fish-shaped domain.
//=====

template<class ELEMENT>
